

Uniform Mitigation Verification Inspection Form

	nis form and any docu	mentation provide	ed with the insurance	policy		
Inspection Date: 4 - 10 - 2017						
Owner Information		<u> </u>				
Owner Name: Bordeaux Village 3			Contact Person:			
Address: 13602 Frigate Ct Bldg. N		Home Phone:				
City: Clearwater		Work Phone:				
County: Pinellas			Cell Phone:			
Insurance Company:			Policy #:			
Year of Home: 1981	# of Stories: Two		Email:			
NOTE: Any documentation used in valid accompany this form. At least one photo though 7. The insurer may ask additional	lating the compliance or graph must accompany t I questions regarding th	this form to validate e mitigated feature(s	each attribute marked is verified on this form.	in questions 3		
Building Code: Was the structure built the HVHZ (Miami-Dade or Broward con	unties), South Florida Bui	lding Code (SFBC-94	1)?			
A. Built in compliance with the FBC a date after 3/1/2002: Building Pern			002/2003 provide a perm	it application with		
B. For the HVHZ Only: Built in corprovide a permit application with a C. Unknown or does not meet the re	date after 9/1/1994: Build	ng Permit Applicatio	. For homes built in 199 n Date (MM/DD/YYYY)	4, 1995, and 1996		
	•					
 Roof Covering: Select all roof covering OR Year of Original Installation/Replac covering identified. 						
Permit	Application Date	FBC or MDC Product Approval #	Vear of Original Installation or Replacement	No Information Provided for Compliance		
1. Asphalt/Fiberglass Shingle 1 - 23	3 - 2017					
2. Concrete/Clay Tile	2017			$\overline{\Box}$		
3. Metal						
4. Built Up						
5. Membrane						
6. Other_						
A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later.						
B. All roof coverings have a Miamiroofing permit application after 9/1/	1994 and before 3/1/2002	OR the roof is origin	al and built in 1997 or lat			
C. One or more roof coverings do no	•					
☐ D. No roof coverings meet the requi	rements of Answer "A" o	r "B".				
3. Roof Deck Attachment : What is the we	eakest form of roof deck a	ttachment?				
A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c by staples or 6d nails spaced at 6" along the edge and 12" in the fieldOR- Batten decking supporting wood shakes or woo shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivaler mean uplift less than that required for Options B or C below. B. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 12" inches in the fieldOR- Any system of screws, nails, adhesives other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance than 8d nails space a maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf.						
					C. Plywood/OSB roof sheathing wi 24"inches o.c.) by 8d common nails decking with a minimum of 2 nails	s spaced a maximum of 6' per board (or 1 nail per bo

<u>NAS</u>		or		of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent istance than 8d common nails spaced a maximum of 6 inches in the field or has a mean uplift resistance of at least a spaced and the spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of at least a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a mean uplift resistance of a spaced and trusted in the field or has a spaced and trusted in the field or has a spaced and trusted in the fie
			-	d Concrete Roof Deck.
		E.	Other:	
		F.	Unknown	or unidentified.
	Ш	G.	No attic a	ccess.
4.		et c	of the inside	achment: What is the <u>WEAKEST</u> roof to wall connection? (Do not include attachment of hip/valley jacks within e or outside corner of the roof in determination of WEAKEST type)
	Ш	A.	Toe Nails	Truss/rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall, or
				Metal connectors that do not meet the minimal conditions or requirements of B, C, or D
	Mir	ıim	al conditio	ons to qualify for categories B, C, or D. All visible metal connectors are:
				Secured to truss/rafter with a minimum of three (3) nails, and
			×	Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe corrosion.
	X	B.	Clips	
			X	Metal connectors that do not wrap over the top of the truss/rafter, or
	_	_		Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nai position requirements of C or D, but is secured with a minimum of 3 nails.
	Ш	C.	Single Wr	Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.
		D.	Double W	Vraps .
				Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or
				Metal connectors consisting of a single strap that wraps over the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.
			Structural Other:	Anchor bolts structurally connected or reinforced concrete roof.
		G.	Unknown	or unidentified
		Н.	No attic a	ccess
5.				What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).
		A.	Hip Roof	
		В.	Flat Roof	
	K	C.	Other Roc	
		А. В.	SWR (also sheathing dwelling f No SWR.	r Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR) of called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the from water intrusion in the event of roof covering loss. or undetermined.

7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, or .3) as applicable.

Opening Protection Level Chart Place an "X" in each row to identify all forms of protection in use for each opening type. Check only one answer below (A thru X), based on the weakest form of protection (lowest row) for any of the Glazed openings and indicate the weakest form of protection (lowest row) for Non-Glazed openings.		Glazed Openings				Non-Glazed Openings	
		Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors
N/A	Not Applicable- there are no openings of this type on the structure		X	X	X		X
Α	Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights)						
В	Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights)						
С	Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007						
D	Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E 330, ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance						
N	Opening Protection products that appear to be A or B but are not verified						
IN	Other protective coverings that cannot be identified as A, B, or C						
Х	No Windborne Debris Protection	X				X	

A. Exterior Openings Cyclic Pressure and 9-lb Large Missile (4.5 lb for skylights only) All Glazed openings are protected at
a minimum, with impact resistant coverings or products listed as wind borne debris protection devices in the product approval
system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure
and Large Missile Impact" (Level A in the table above).

- Miami-Dade County PA 201, 202, and 203
- Florida Building Code Testing Application Standard (TAS) 201, 202, and 203
- American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996
- Southern Standards Technical Document (SSTD) 12
- For Skylights Only: ASTM E 1886 and ASTM E 1996
- For Garage Doors Only: ANSI/DASMA 115

☐ A.1 All Non-Glazed openings classified as A in the table above, or no Non-Glazed openings exist
A.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level B, C, N, or X in the table above
A.3 One or More Non-Glazed Openings is classified as Level B, C, N, or X in the table above
B. Exterior Opening Protection- Cyclic Pressure and 4 to 8-lb Large Missile (2-4.5 lb for skylights only) All Glazed openings are protected, at a minimum, with impact resistant coverings or products listed as windborne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level B in the table above):
• ASTM E 1886 <u>and</u> ASTM E 1996 (Large Missile – 4.5 lb.)
• SSTD 12 (Large Missile – 4 lb. to 8 lb.)
• For Skylights Only: ASTM E 1886 and ASTM E 1996 (Large Missile - 2 to 4.5 lb.)
B.1 All Non-Glazed openings classified as A or B in the table above, or no Non-Glazed openings exist
B.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level C, N, or X in the table above
B.3 One or More Non-Glazed openings is classified as Level C, N, or X in the table above
C. Exterior Opening Protection- Wood Structural Panels meeting FBC 2007 All Glazed openings are covered with plywood/OSB meeting the requirements of Table 1609.1.2 of the FBC 2007 (Level C in the table above).
C.1 All Non-Glazed openings classified as A, B, or C in the table above, or no Non-Glazed openings exist
C.2 One or More Non-Glazed openings classified as Level D in the table above, and no Non-Glazed openings classified as Level N or X in the table above
C.3 One or More Non-Glazed openings is classified as Level N or X in the table above

*This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form.
